

SPHE - Climate Change 1

Part A: Write a Response

Have a read of this person's belief down below. Write a response to try and persuade this person that climate change is caused by humans. You will need to use research and facts in your argument. Think carefully about how you will convince this person. Remember, this is a conversation not a battle! Don't offend or fight with the person!

"I don't think humans are causing climate change at all! We have always had changes in climate over the years. Sure look at the Ice Age! Anyway, greenhouse gases are a natural thing. Animals and plants have been producing these gases ever since the start of time!"

Dear Karen,
