

The Explorer - Chapter 11

In Chapter 11, Lila finds a new animal friend.

We hear a great description of a sloth in this chapter. The author uses lots of adjectives to paint a picture in our heads. Can you figure out what zoo animals I'm describing in the boxes down below?

I saw it from miles away.
Its long neck stretched
into the sky. It was
munching on some leaves.
It's orangey-brown pattern
was all over its body and
neck.

It was sitting up in a tree
when I saw it. Suddenly, it
jumped out of the tree and
swung to another tree. It
walked carefully along a
branch, before it picked up
some fruit to eat.

There were loads of them
standing in the water.
Their pink feathers were
everywhere! Their long
legs looked like sticks.
They were eating
something in the water.

He was sleeping when I
saw him. Lying in the sun
on top of a rock. His thick,
bushy hair surrounded his
whole face. He must have
seen something because he
let out a huge roar!

At first I couldn't see her.
Then I saw something
moving in corner of leaves.
I saw the long, forked
tongue flick out and I
think I heard a little hiss.
Then I saw it move!

They were swimming in the
muddy water. Their heads
popped up to get air. After
a while, the biggest one
waddled out of the water
and rolled in mud. They
were huge!
